

YI-YUNG “HARRY” CHEN

Quincy, MA | 717-742-7470 | harrychen0515@gmail.com | <https://harry-yyc.github.io/Harry-s-Website/>

PROFESSIONAL SUMMARY

Data Analyst with an M.S. in Business Analytics from UMass Boston (GPA: 3.97), with hands-on experience in SQL, Python, R, Tableau, and data visualization. Developed projects involving web scraping, statistical analysis, machine learning, database design, and business intelligence. Seeking a Data Analyst or Business Analyst role.

TECHNICAL SKILLS

Languages: *Python, SQL, R* **Data Analysis:** *Pandas, NumPy, Matplotlib, Seaborn, Statistical Analysis, Machine Learning* **Databases:** *MySQL, SQLite* **BI & Visualization:** *Tableau, Excel* **Tools:** *Jupyter Notebook, RStudio, AWS*

EDUCATION

University of Massachusetts Boston

M.S. in Business Analytics, Specialization in Big Data Analytics
GPA: 3.97

Boston, MA

August 2022- May 2024

University of Massachusetts Boston

B.S. in Management, Concentration in Finance

Boston, MA

August 2016 – December 2020

PROFESSIONAL EXPERIENCE

Boston Tax Help Coalition

Tax Preparer Intern

Boston, MA

January 2021-May 2021

- Assisted with tax preparation and credit-building services for community members through Boston-area tax assistance centers.
- Supported clients as a tax preparer and bilingual interpreter, communicating financial and tax-related information clearly.

TECHNICAL PROJECTS

Nintendo Switch Customer Review Analysis | *Python, SQL, NLP, Selenium*

- Scraped 5,600+ Best Buy product reviews, star ratings, and timestamps using Selenium and Regex; stored raw data in SQLite for structured analysis.
- Cleaned and transformed review data with Pandas and applied text-mining/NLP techniques to analyze customer sentiment and satisfaction patterns.
- Built Matplotlib and Seaborn visualizations to examine rating distributions, review helpfulness, and monthly satisfaction trends.

Housing Price Range Classification | *Python, Machine Learning*

- Developed and compared Decision Tree, Random Forest, and Naive Bayes models to classify property prices into High/Medium/Low tiers; best accuracy reached 72.5% with Naive Bayes.
- Applied equal-frequency binning, feature engineering, and correlation-based feature selection to prepare training data.
- Evaluated models using precision, recall, and F1-score and identified property size and spatial characteristics as key classification drivers.

GigSmart On-Demand Service Marketplace Database System | *MySQL*

- Designed a normalized relational database with 10+ tables covering bookings, transactions, providers, and clients.
- Developed 10+ stored procedures using multi-table joins, dynamic SQL, and aggregation to automate fee calculations, payment tracking, and service-status updates.
- Implemented role-based access control and database permissions to protect transaction and customer data.

IMDb Movie Analysis 2010–2023 | *Tableau*

- Integrated and modeled multi-source movie, cast, and person datasets in Tableau using primary/foreign key relationships and data-quality filtering.
- Built an interactive dashboard with cross-filtering, geographic maps, ranked charts, and trend visualizations to analyze production and rating patterns.
- Analyzed movie production, ratings, genres, and geographic trends across countries and continents for targeted market analysis.
